SAARANG WEBOPS APPLICATION

Name: Shubhangi Ghosh	**Nick: -**
Roll No:EE15B129	**Hostel:**Sarayu
E-mail:riafc34@gmail.com	**Room No.**440B
Department: Web and Mobile Operations	**Contact No.** 9940108963

1.
- Events could have been oraganised date or relevance (popularity) wise in the Saarang app.
- Links and other elements can be indexed with key tags and search bar can be provided so that the users unfamiliar with presise event names can search and find his/her way easily.
- The website should be more self-explanatory. Brief information about links can be provided while hovering over them.
- The visual impact of the website can be improved by organsing the links in a relevant theme.

2. I think that indexing links and information with key tags and including a search bar for based on the tags would be a good help for people unfamiliar with the Saarang happenings.

3. I am comfortable in coding in C, C++, Python and Javascript.
I'm familiar with the MEAN stack framework.

4. My technical skillset is already briefly forementioned. I promise to be sincere and put in maximum efforts to fulfil duties assigned to me completely.

5. I think that the role of a QMS Manager is to:
- ensure that the website or the app conforms to the user's need completely.
- Extract the capabilities of the team members to make sure that the final result is as great as can be.
- Keep track of and regularly monitor the work of other team members.
- Keep track of user expectations and make sure that the website and the app is designed accordingly.
